| <b>Name of Module/Course</b>                           |   | <b>Holistic Science and Systems Thinking</b> – Solving complex problems in international development   |                                      |                           |
| <b>Short description</b>                               |   | <p>Why do hunger, poverty and environmental degradation persist despite more than 50 years of international development programmes? Can we solve complex problems with a mechanistic worldview? How can we think our way out of a problem when the problem is the way we think? What are the benefits of a systems view of life? What can we learn from the worldview of indigenous peoples?</p> <p>Join this course to explore the benefits of holistic science and systems thinking for international development practices. Understand the differences between a reductionist and a holistic focus on solving complex problems in international development. Learn about the wisdom of indigenous peoples.</p> <p>We will dialogue and put in practice the benefits of holistic science, systems thinking and the indigenous worldview to solving complex problems in the development sector.</p> |                                      |                           |
| <b>Name of Programme</b>                               |   | -  |                                      |                           |
| <b>Name of University</b>                              |   | -  |                                      |                           |
